 This label is a draft

The below is not a final, just a preview

What is this label? 

Dietary Composition with Mental Disorder Cases

Description

The dataset is a combination of dietary compositions by commodity group and estimated cases of mental illness throughout the years. It integrates nutritional data with epidemiological data to potentially explore correlations between diet and mental health outcomes.

Keywords

Nutrition Mental Health Epidemiology Psychology
Dietary Composition

How to use it?

Intended Use

- **Intended Domain.** public health
- **Intended Domain.** nutrition
- **Intended Domain.** epidemiology
- **Intended Domain.** healthcare analytics
- **Intended Use.** Study the correlations or associations between dietary habits and the prevalence or incidence of various mental health disorders
- **Other Responsible Uses.** Inform public health policies and create targeted nutritional programs

☒ Known Uses

Restrictions on Use

- no

Do Not Use

- Domain. n/a
- **To make unsupported individual clinical diagnoses or to stigmatize certain dietary habits without proper context and professional health advice.** It is not accurate for healthcare

Collection and Labeling Protocols

Data Imputation Protocols

n/a

Data Manipulation Protocols

We joined the two datasets by matching by the countries and years

Missing Data

We excluded diet data from the years 1950 to 1989 because there was no mental health data for those years. We also excluded data about high/middle/low income countries and general regions because there was not enough data from both sets to match together.
